This office action is in response to the amendment filed 4/30/10. Claims 11 and 22 have been amended. Claims 1 – 10, 17 and 27 - 29 have been cancelled. Claims 30 - 34 have been added. Claims 11 – 16, 18 – 26 and 30 – 34 are now pending.

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In abstract, last line, delete "figure 1."

### **REASONS FOR ALLOWANCE**

Claims 11 – 16, 18 – 26 and 30 – 34 are allowed.

The following is an examiner's statement of reasons for allowance:

The present claims are allowable over the closest reference of VANDENHENDE et al (US 2003/0119925).

Applicant claims:

A process for recovering at least one polymer in solution in a solvent which consists essentially of precipitating by means of a non-solvent introduced gradually into the solution to form the precipitation medium, wherein:

in the course of the introduction of the non-solvent into the precipitation medium, there is first a phase separation (into a continuous phase rich in solvent, in which the polymer is dissolved, and into a disperse phase, consisting of droplets rich in non-solvent) and then there is a phase inversion (the continuous phase then becoming the phase rich in non-solvent, and the disperse phase becoming the phase rich in solvent containing the dissolved polymer)

the non-solvent is initially introduced into the precipitation medium in liquid form only and in a quantity (Q') which is not zero but is less than the quantity (Q) required to bring about the phase inversion, and the remaining quantity of non-solvent is subsequently introduced into the precipitation medium as a flow in which the vapor fraction is predominant,

when a phase separation agent is used in the precipitation medium, the solution of polymer to be precipitated is substantially free of this phase separation agent at the time of phase inversion.

VANDENHENDE discloses a process for recycling a plastic dissolved in a solvent and precipitated out with a non-solvent comprising the gradual addition of the non-solvent to the plastic solution where a phase inversion is generally observed, that is to say the precipitation medium changes from a dispersion of the non-solvent in the solvent to a dispersion of the solvent in the non-solvent. The non-solvent is injected in both liquid and gaseous form. VANDENHENDE discloses the addition of a phase separation agent at the time of phase inversion

Art Unit: 1796

and thereafter and a looped process wherein the phase separation agent is present in all stages.

VANDENHENDE fails to teach a solution of polymer free of phase separation agent at the time of phase inversion.

No prior art teaches or fairly suggests the claimed process described above wherein the solution is substantially free of phase separation agent at the time of phase inversion. Applicant shows unexpected results of improved ASG/Dav ratio when the phase separation agent is not present during said phase inversion.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to FRANCES TISCHLER whose telephone number is (571)270-5458. The examiner can normally be reached on Monday-Friday 7:30AM - 5:00 PM; off every other Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jim Seidleck can be reached on 571-272-1078. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
